How to Download and Use SPQR, a README

Brian Liu

December 10, 2016

1 Installation Requirements

Requires OSX. Download and run the .ipa file. Adjusting security settings in System Preferences may be necessary. This website has instructions on installing and running an ipa file. You will need iTunes.

2 Operating Instructions

The .ipa should operate similar to the medium-fi prototype.

3 Limitations

Since there is no userbase, the two profiles are hard-coded. The interactions through phone call, texting, and finding people on the map used Wizard of Oz techniques. Profile information, suggested phrases, and maps are also hard-coded.
